

DOUBLE BRIDGE 180 cavity

Combiners allow several radio channels to operate at one site using a common antenna. The MCPD 180 V double bridge combiners guarantee isolation between channels with respect to manifold or starpoint combiners. They are composed by two 180 VHF cavities and two hybrid devices. Expansion of channels is done easily in the field without need of instrumentation or cavity retuning. Each channel is allocated in a single 4 unit 19" cabinet. Up to 10 channels in the VHF range can be installed in a 42 units, 19" standard rack.
